## Insulation and Resistance Measuring Instrument with Voltage Measuring Range

3-349-347-03  
4/8.14

- Insulation resistance measurement: 0.1 ... 400 M $\Omega$
- Low-resistance measurement: 0 ... 4  $\Omega$
- Voltage measurement: 0 ... 500 V
- LED and beeper
  - as function control
  - for GO/NO GO decisions
- Scale illuminated by LED for insulation and low-resistance measurement
- Compact and rugged  
For service calls under harsh conditions and laboratory use

### Features

#### Nominal Voltages: 100 V, 250 V and 500 V

The instrument is suitable for the measurement of insulation resistance at voltage-free devices and equipment with nominal voltages of up to 500 V.

#### Low-Resistance Measurement: 0 ... 4 $\Omega$

Low-resistance measurement is performed in accordance with VDE 0413, part 4. It is used for testing resistance at ground cables, protective conductors and equipotential bonding conductors, including related connections and terminals.

#### Voltage Measurement to 500 V

The instrument is also equipped with a 500 V measuring range for direct and alternating voltages. This provides users with the advantage of checking devices under test for the absence of voltage, and discharging capacitive devices under test.

#### Minimal Battery Depletion

Measurement is only performed in the resistance measuring ranges when the M $\Omega$  or  $\Omega$  key is pressed. Battery service life is maximized in this way.

Voltage measurement can be performed without using the battery.
